(2) Construction and operation of pollution control facilities

During the reporting period, the Group strictly abided by the requirements of national and local laws and regulations, increased investment in pollution control and strengthened environmental protection management, implemented transformation and maintenance of dust collectors to ensure that the dust collectors are in the best operating condition, and achieved continuous and stable emission of particulate matters for each outlet. NOx -NOx Combustion Upgrading + Process Optimization + was implemented to achieve standard emission. SO2 was controlled from the source by using low-sulfur coal and controlling SO2 content in raw materials. Impact of SO2 emission on the environment was further reduced by using water-based compound desulfurization technology and optimization of wet desulfurization.

(3) Environmental impact assessment on the CIPs and other administrative permits on environmental protection

During the reporting period, all CIPs of the Company implemented environmental impact assessment system in accordance with the requirements of the EIA Law. In addition, clean production audit was carried out in strict accordance with the requirements of the clean production law and the clean production authorities.

All plants under the Group strictly complied with the relevant requirements of the measures for the management of pollutant emission permits to obtain emission permits, and strictly abided by the requirements for emission permits.

(4) Contingency plans for emergency environmental incidents

In strict accordance with the requirements of the national emergency response methods and the provisional management methods for emergency management of environmental incidents, subsidiaries of the Group have formulated emergency plans for environmental emergencies and put on records, and set up leading groups for emergency handling of environmental pollution emergencies. Through regular training and drills on emergency plans, all the subsidiaries were ensured to respond quickly and in a timely manner after unexpected environmental incidents occur, and prevent environmental incidents from affecting the environment and the public.

(5) Self-monitoring program on environment

The Company formulated self-monitoring programs based on the requirements of the self-monitoring guidelines for the environment and conducted self-monitoring in strict accordance with national environmental monitoring technical specifications and environmental monitoring and management regulations. The self-monitoring items include soot, sulfur dioxide and nitrogen oxides. The self-monitoring method is automatic monitoring combined with manual monitoring. The automatic monitoring equipment used has passed the acceptance of the environmental protection departments. The regular smoke and gas monitoring could ensure the normal operation of the equipment and normal data transmission. Manual monitoring adopted qualified third-party monitoring companies to monitor and truly reflected the level of pollutant emissions.

(6) Other explanations

In accordance with the requirements of the national and local governments on implementing off-peak production and heavy pollution weather emergency response, subsidiaries of the Company cooperated with local governments to make our skies blue again and minimize the impact of heavy pollution weather on the environment by means of stop production and production limits.

In accordance with the requirements of the environmental protection departments, each subsidiary regularly published emission data on the environmental monitoring information disclosure platforms of all provinces and cities and accepts public supervision. Meanwhile, through real-time broadcast of pollutant emissions at the electronic displays, they also accepted supervision of community residents and other stakeholders.

It is hereby announced the above.
